Define the Problem Statements

Customer Problem Statement

Create a problem statement from the customer's point of view. The problem statement focuses on the difficulties customers and IT users experience when incidents are reported, tracked, assigned, escalated, and resolved.

Project Context

In many organizations, IT incidents are reported through emails, phone calls, or informal communication channels. This leads to poor tracking, lack of proper classification, delayed escalations, and minimal visibility into resolution progress. Without structured Incident Management, issues may remain unresolved, SLAs may be breached, and root cause tracking becomes difficult.

Customer Problem Statement Template

PS-1: Primary Problem Statement

I am an IT user trying to report an incident and get it resolved quickly, but incidents can be difficult to track and may not be classified or assigned correctly because the existing reporting process can be informal and inconsistent, which makes me feel frustrated and uncertain about the progress of my issue.

PS-2: Automation-Focused Problem Statement

I am an IT user trying to receive timely support for an incident, but delayed assignment, escalation, and SLA monitoring can slow down resolution because these activities are not consistently automated, which makes me feel that my issue may remain unresolved without clear visibility into its progress.

Problem Statement Summary

The core problem is the lack of a structured and automated Incident Management lifecycle. The proposed ServiceNow solution should improve incident tracking, classification, assignment, SLA monitoring, escalation, communication, resolution, and closure.

I am (Customer)	An IT user / employee who needs an IT issue to be reported and resolved.
I'm trying to	Report an IT incident and get it classified, assigned, tracked, and resolved quickly.
But	Incidents may be reported through different channels and may not be properly tracked or assigned.
Because	There is no consistent and automated incident lifecycle for classification, assignment, escalation, SLA monitoring, and closure.
Which makes me feel	Frustrated and uncertain because I have limited visibility into the status and expected resolution of my incident.
